DUTIES:

Great opportunity for an experienced Scientist or Laboratory Manager in bioanalysis for biologics in our rapidly growing China research laboratory facility. The ideal candidate will have at least 3 years prior research experience in the pharmaceutical, biotech, CRO and/or academic industries, hands-on experience on bioassays, excellent understanding of GLP regulations and relevant guidelines, and strong written and oral communication skills

QUALIFICATIONS:

- MS/PhD degree in Life Sciences or Biochemistry
- 3+ years of experience in a biopharmaceutical, pharmaceutical and/or CRO industry
- 3+ years of scientific experience in assay development, Biomarker research & Biologics using ELISA and MSD
- GLP compliance experience or knowledge of GLP requirements and functional knowledge of LIMS and other electronic data systems is preferred
- Thorough knowledge and hands on experience of a range of bioassay methods relating to Biologics drug development and Biomarker assays

RESPONSIBILITIES:

- Assist in setting up and managing of Biomarker Research and Biological Services
- Recruit, train and supervise laboratory staff
- Work with senior management and staff to assess and respond to business and technical needs
- Represent Company during Sponsor audits and evaluations
- Expert “hands on” support for the delivery of a range of assays being developed within the group
- Lead studies as Principal investigator
- Participate in technical discussions with clients on site and at their sites as necessary to support their analytical needs and to determine the appropriate resolution of client issues
- Supports Sales and Marketing efforts on site and at client sites as requested
- Assign and schedule study performance
- Guide junior staff and less experienced peers in GLP interpretation
- Prepare SOPs supporting Analytical testing, Quality systems, data systems, technical issues and instrumentation
- Prepare and oversee the preparation of technical and validation reports
- Assist in other duties as required
