

中国 研发

EXPANDING OUR HORIZONS IN NEURODEGENERATIVE DISEASE.

Vice President, Operations

R&D China

GSK R&D Shanghai will focus on research into neurodegeneration with the objective of creating new medicines for such severe disorders as multiple sclerosis, Parkinson's disease, and Alzheimer's disease. The site will eventually direct our global discovery and development activities within its therapeutic area, from drug-target identification to late-stage clinical studies, while collaborating with research institutions elsewhere in China and other countries.

This is a critical position, responsible for the strategic management of all R&D China's operational support needs; ensuring the delivery of new facilities, designed to meet the scientific advances and the ambitious future growth plans of R&D China. We are seeking both a visionary and a practical, hands-on person who can define & shape R&D China's operations strategy in line with the future scientific direction.

The candidate will be an individual with a strong R&D operations background as well as knowledge of the drug discovery science base in chemistry, biology, informatics and technology, in order to respond to the future needs of R&D China

The ability to speak Mandarin would be advantageous in the role, together with familiarity of Chinese culture and the willingness to make a long term commitment to live and work in Shanghai. You will have experience in leading/managing large and complex organisations and of being an effective leader in a matrix setting. Proven ability to build and manage an empowered organisation that allows staff to realise their full potential, attract, retain and develop highly talented and diverse contributors.

This role offers an outstanding opportunity to be involved in the first fully integrated R&D facility in Shanghai at its onset, to build a substantial R&D team which is envisaged to be more than 200 dedicated scientists by the end of 2008. The vision of GSK is unique as the facility will be a Chinese dedicated site for neurodegeneration with full accountability from target to the global healthcare market.

To apply, please email your CV along with a covering letter to rd.chinarecruit@gsk.com

Together we can make life better.
